Impact of an Integrated Specialty Pharmacy Model on **Patient Access to Dalfampridine**

Gabrielle Givens, PharmD Candidate, Aimee Banks, PharmD, BCPS, MSCS, Josh DeClercq, MS, Leena Choi, PhD, Autumn Zuckerman, PharmD, BCPS, AAHIVP, CSP, Megan Peter, PhD

Quick Facts

Evaluated

262 Patients prescribed dalfampridine

Prescriptions (260 Pre-Vanderbilt Specialty Pharmacy and 30 Post-Vanderbilt Specialty Pharmacy)

Results

Insurance approval rate

97% Pre-Vanderbilt Specialty Pharmacy

Post-variation:
Specialty Pharmacy

Patient starting therapy

93% Pre-Vanderbilt Specialty Pharmacy

100% Post-Vanderbilt Specialty Pharmacy

Median time to medication access decreased from

VSP inclusion in the dalfampridine distribution network enabled all patients to start prescribed dalfampridine and the time to access dalfampridine was faster.

Impact of an Integrated Specialty Pharmacy Model on Patient Access to Dalfampridine

Gabrielle Givens, PharmD Candidate!, Aimee Banks, PharmD, BCPS, MSCS², Josh DeClercq, MS³, Leena Choi, PhD³, Autumn Zuckerman, PharmD, BCPS, AAHIVP, CSP², Megan Peter, PhD

Background

with multiple sclerosis (MS).1 Dalfampridine, an oral specialty medication, increases walking speed and duration in patients

- Patients often struggle to access specialty medications due to
- Limited distribution networks (LDNs), which restrict which pharmacies can dispense a drug requiring patients to till medication from select pharmacies
- Insurance restrictions, costs, or challenges navigating specialty pharmacies. Integrated specialty pharmacies embed pharmacists in clinics and dispense drugs from the

internal pharmacy.

Objective

Access Time (days)

before and after Vanderbilt Specialty Pharmacy (VSP) gained access to dispense the medication To assess the impact of LDNs on patient access to dalfampridine by comparing patient access

Patient diagnosis

Design	Single center retrospective cohort study
Sample	Inclusion: Adult patients with MS, prescribed dalfampridine by a VUMC provider from 3/2010 to 12/2018
	Exclusion: Prescriptions initiated at an external pharmacy or non VUNC provider, transferred to VSP (without need for new PA), or without documentation of the original prescription
Outcomes	1. Insurance approval
	2. Medication access time: Time from decision to treat to insurance approval
	3. Rate of therapy initiation

Results

Figure 2: Median Time from Decision to Treat to Insurance Approval

Post-VSP, rates of insurance

restarts after a prior lapse or discontinuation

resulting in 285 dalfampridine prescriptions from 258 due to prior discontinuation or lapse in therapy, Twenty-six patients had more than one prescription

Prescriptions

approval and number of patients starting therapy increased to

Post-VSP, median access time

Conclusions

After VSP gained access to dispense dalfampridine,

When LDNs are removed, integrated specialty counseling, and safety interventions after patients pharmacists can provide medication monitoring. initiate treatment
