

## Comparison of provider satisfaction with specialty pharmacy services in integrated health-system and external practice models: A multisite survey

### Study Purpose

- Obtain insight into providers' satisfaction with services offered by integrated health-system specialty pharmacies
- Determine whether providers' perceptions of services offered under an integrated model differ from perceptions of external specialty pharmacy services

### Methods

- Surveyed
  - 1,843 providers
  - 10 academic medical centers
- Assessed
  - 10 statements on provider satisfaction (1= strongly disagree, 5= strongly agree)
  - Integrated vs. external specialty pharmacies

### Results

- Add 524 respondents (28% response rate)
- Higher overall satisfaction with integrated specialty pharmacies: 4.72 vs. 2/97 ( $p < 0.001$ )
- Satisfaction ratings higher for all 10 items evaluating quality of services ( $p < 0.05$ )

### Conclusions

- **Based on provider feedback integrated health-system specialty pharmacies:**
  - Offered more helpful and prompt coordination with clinic
  - Promoted significantly higher level of provider satisfaction with regard to obtaining prior authorizations and reducing time to treatment initiation
  - Provided higher quality of ongoing communication with patient interactions
  - Improved specialty medication-related outcomes
